

SME Building CCTV Surveillance

Challenge

A business owner operating from a warehouse was looking for a CCTV system with a visual deterrent externally and discrete surveillance of a workshop and an internal showroom.

Remote monitoring of the system via a smartphone and the ability to export footage for time-lapse promotional videos were also required.

Solution

A Wisenet Wave Video Management System with deep camera integrations was chosen:

- Cross platform options such as Microsoft Windows, Apple MacOS for your desktop, mobile with optional Cloud-Connect synchronisation
- One App with many features such as Smart Motion Search, Time-Slice Search and Audit Trail
- Deep camera integrations such as:
 - WiseStream
 - All triggering events including sound classification and loitering
 - Simple Focus / Initialize Focus / Lens Control settings
 - Multi-directional camera support
 - Hallway view
 - Camera profile / image configuration
- Form factors were tailored for aesthetics and the environment:

Outdoor 4MPx Network IR Bullet Camera

Q Series 5MP Internal Fixed Lens Mini Dome Camera

Pinhole camera with separated camera body for discrete application in a showroom

Result

Time & Focus successfully completed the installation of the Hanwha Wisenet CCTV system with the business owner being able to remotely monitor his premises via a smartphone.

Time-lapse videos of work being completed in the workshop can be edited on the Wisenet Digital Video Recorder supplied for storing footage for 30 days.

The system carries a 12-month warranty and can be expanded to add more CCTV cameras and storage as required.
